### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Clarke et al. (U.S. Patent No. 5,667,113) in view of Bryant (U.S. Patent No. 4,856,299).

Clarke et al. teach a fuel distributing apparatus comprises a fuel dispensing nozzle (134). Clarke et al. failed to teach a static absorbing material formed in a manner to conform to the shape of the handle of the fuel dispensing nozzle. Bryant teaches a knitted fabric having improved electrical charge dissipation (static absorbing, antistatic material), absorption and stain resistance (abstract) (see entire patent). It would have been obvious to one skilled artisan in the art at the time of the invention was made to have a knitted fabric having improved electrical charge dissipation (static absorbing, antistatic material), absorption and stain resistance conformed to the shape of the handle to eliminate static electricity.

2. Claims 3-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over both Clarke et al. and Bryant and further in view of Slusher (U.S. Patent No. 6,725,590).

Clarke et al. and Bryant have all the features of the invention but both failed to teach an adhesive strip. Slusher teaches an adhesive strip and/or two-sided adhesive strip (28, 34, 36, 30a and 32a) (see Fig. 9). It would have been obvious to one skilled

artisan in the art to have an adhesive strip and/or two-sided adhesive strip to form the knitted fabric to a semicircular tube to fit onto the handle of the fuel dispensing nozzle.

***Conclusion***

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thach H Bui whose telephone number is 703-305-0063 and/or 571-272-4898. The examiner can normally be reached on Monday-Friday, 7:30-4 p.m.
